"Start meeting tomorrow’s standards today."
„Thanks to COSIMA enterprise, we were able to migrate our existing document structures and data to the new platform within a short space of time and add features without any trouble at all.“

Waltraud Winter, Head of PLM Tools, SIEMENS Healthcare GmbH
COSIMA enterprise is the tried-and-tested standard CCMS* that you can flexibly adapt and expand in line with your needs. Customer-specific information models can be configured with ease, while existing data and data structures are simply migrated.

Your business:
You wish to carry out your documentation tasks using a professional standard CCMS. This system should be flexibly adaptable to your current and future needs so as to convey the unique selling points of your top-line products in technical documentation as well.

Our solution:
Our professional standard system COSIMA enterprise covers all the bases when it comes to documentation. It is versatile and can be quickly expanded for additional requirements.

Fit for the future:
COSIMA enterprise is under constant development. The software architecture ensures that updates are possible at any time. A maintenance agreement can also be concluded for all customer-specific modifications, ensuring that all expansion features also work on the latest software updates.

*Component Content Management System
"The simple documentation solution to set your products apart."

Benefit from professional advice and top-quality support with COSIMA enterprise.

Dr. Carsten Kropf,
Software Developer, DOCUFY GmbH
Simple transition
- Retain your investments in existing documentation and translations with an easy-to-use system for migrating existing information models and documentation processes
- Smooth transition to a topic-based documentation process thanks to the smart combination of existing and new document structures
- Step-by-step migration through the parallel operation of new and existing documentation processes on a single COSIMA system

Quick
- Automated, transparent, and 100% reliable completion of time-consuming tasks
- Save time creating, editing, and translating documentation

Collaborative
- Online connectivity to link and reconcile different locations and documentation processes
- Simple involvement of external documentation providers and service providers
- Module editing in several source languages

Reliable
- Refined, tried-and-tested system
- Pool together technical and industry-specific expertise and valuable practical experience

Adaptable
- Additional functions and individual interfaces can be added at any time
- Seamless integration into the existing IT landscape
- Scalable to practically any dimension—for long-term security and investment protection

Your benefits at a glance:
**Product variant management:**
*Classification instead of drag-and-drop*
The new COSIMA still lets you put together documents from topics using drag-and-drop and filter individual manuals from master documents. You can also generate product-specific documentation based on a product configuration 100% automatically thanks to a fully configurable classification (such as Professor Dr. Ziegler’s PI Classification method).

**Versioning:**
*Revision certainty instead of the risk of mix-ups*
Versioning allows you to “freeze” content, preventing unintentional changes to modules and documents. In addition, changes usually generate a new revision level. Copying ensures a complete, clearly structured history that is available quickly, if need be.

**Translation management:**
*Linguistic diversity instead of exploding costs*
Integrated translation management saves time and money, and guarantees a highly automated workflow. The system automatically compiles all the necessary files and makes them available, ensuring that only those modules that are not yet available in the foreign language currently needed get translated. Files can be easily exported an imported as a ZIP or hot folder. COSIMA supports the Common Translation Interface (COTI).

**Fully automated media production:**
*Automation instead of effort*
Publish without post-editing: Define the layout of all your documents with the help of style sheets or DOCUFY Layouter. You can then automatically generate a wide range of different target and output formats—such as TopicPilot, PDF, Word, HTML, CHM (compiled/online help)—from just a single data source.

With DOCUFY Layouter you can also create as many layout variants as you want—without any programming experience.

**DOCUFY Layouter:**
*Flexibility instead of uniformity*
DOCUFY Layouter makes it easy to design the output layout for PDF and TopicPilot. An easy-to-use interface allows you to set as many layout criteria as you want and use them flexibly to publish different layouts in COSIMA and TopicPilot. Intelligent inheritance mechanisms reduce the effort for layout variants to a minimum. Thus, CI-compliant layout variants can easily be derived from a master layout.
Cross-references:
Clarity instead of headaches
Cross-references, which are easy to create thanks to drag-and-drop, relieve technical writers’ headaches through intelligent differentiation. Is the target reference even available in the corresponding publication? Vital cross-references without a target generate a warning, making fast correction possible. Optional cross-references without a target are not displayed, pure and simple.

Validities:
Variety instead of quantity
The validities function allows you to attribute content to product variants—at module level or for individual text passages. A variant filter ensures that only the content you truly need appears in the document to be published, eliminating the need to copy modules due to marginal differences in product.

Management of software texts:
Concordance instead of conflict
The management of software texts is based on the import and export of intentionally identical content in the form of resource files. Their use ensures that identical texts are used in the source and target languages in both the software and in the corresponding documentation.

Diffing:
Easy comparison instead of confusion
Diffing is geared toward comparing different versions and updates of modules or documents. New content is displayed in green, whereas deleted content is red and crossed out, making it easy to see at a glance every kind of difference in content.

Review client:
Lightning-fast editing instead of never-ending story
The browser-based review client allows colleagues, vendors and customers to open, proofread, and comment on software documents or modules without a fuss. As the writer, you can then work through these comments directly in the editing environment or add your own comments to the module and resubmit it for a new read-through.

Terminology:
Proper technical language instead of alphabet soup
Terminology management allows you to determine which wording may be used in a document or publication—and which wording may not. The differentiation between preferred, prohibited, and permitted wording provides you with reliable support when it comes to creating, proofreading, and editing your documents.

Authoring Memory:
Autocomplete instead of style puzzles
While you write, this feature compares the sentence you have just begun with content already available in the system. If it detects similarities, you get suggestions about the wording of the sentence you are working on. This ensures continuity in terms of style, plus consistent text quality, and it saves you time, effort, and (translation) costs.

Word import and export:
Conversion instead of typing
Import and editing made easy: The handy Word Importer reads the basic structure of your current Word documents, adapts them into the system as corresponding information objects, and “translates” them into XML. A Word export function is also available in addition to the PDF publishing option.
Publication Configurator:
At the press of a button instead of time and effort
The freely configurable Classification in COSIMA defines an Information Space in which all your relevant information can be stored and clearly identified. The Publication Configurator uses this Information Space and lets you generate any documentation you want individually and 100% automatically based on a product configuration.

IGEL:
Text reference instead of design confusion
With IGEL, the graphics tool in COSIMA, you can enrich your images directly in the editing system with callout information such as position numbers, arrows and highlighting, which you place on the image according to your specifications. You can select the appropriate image section, scale the image to the correct size and enlarge important image details with the magnifying effect. The text-image-reference between caption, references and callouts is created automatically during publication. With COSIMA you will receive the usual item numbers and shapes, which you can flexibly adapt and supplement.
A solution that grows with your needs.
“Take advantage of the simple handling of complex structures.”

Get your technical documentation into shape for the challenges of the future while saving time and money.

Nadine Böllner,
CFO DOCUFY GmbH
DOCUFY knows the processes behind technical documentation thanks to its years of experience in the field. We look to the challenges and responsibilities that writers face in their everyday work for guidance when enhancing and adding features to COSIMA. We also take relevant changes in regulation and legislation into account. As a result, you can be assured that your editing processes are always smooth and comply with the latest legal requirements.
 Businesses only make use of 20% of the potential that documentation holds in store.

Traditional print media is making way for digital media, and conventional documents are evolving into a series of topics. DOCUFY is your partner for seizing the potential added value. Our product portfolio makes your technical documentation accessible in ways that go beyond its original use. The valuable information units (topics) that your writers create are organized on different levels, making them available anytime, anywhere, and in a manner perfectly suited to the specific purpose. That's what we call Multi-Level Documentation.
Technical documentation upgrade to the next level of added value.

The previous single-level documentation is becoming multi-level, allowing all company departments, divisions and units to use your technical documentation content. You benefit from an Information Space that is filled using editorial DOCUFY basic technologies and is connected to various applications using the DOCUFY key technology TopicPilot.
Welcome to the Information Space!

Our products define an Information Space that allows you to address individual information units and their variants just the way you need it. This makes it possible to automatically generate product-specific information on a case-by-case basis and publish it in various media.
