Multi-Level Documentation

DOCUFY knows the added value of technical documentation.
“Multi-Level Documentation is our answer to the challenges of tomorrow.”

Get your system ready for the documentation processes of the future today!

Nadine Böllner, 
CFO, DOCUFY GmbH
We believe that the future belongs to market players who connect their company-relevant content at multiple levels in Information Spaces.

The intelligent organization of information is taking on a pivotal role in an era in which printed paper is making way for digital media and conventional documents are evolving into series of topics.

DOCUFY’s software solutions enable you to seize the potential of your documentation at every level. We shape documentation and publication processes in such a way that every information unit makes an optimum contribution to your company’s success in every context.

That’s what we call Multi-Level Documentation.
Businesses only make use of 20% of the potential that documentation holds in store.
Component Content Management Systems (CCMS) organize complex technical documentation processes and support you in complying with legal requirements. DOCUFY invites you to seize even more of the value potential that your content offers. With our Multi-Level Documentation strategy, we have created a range of products that enable every division, unit and department of a company to leverage the content of the technical documentation.

**Current level:**

- Legal requirements
- Technical documentation, such as operating instructions, service manuals and handbooks

**Technical documentation upgrade to the next level of added value:**

- Customer service
  - Order- and product-specific service information
- Marketing
  - Brochures, product literature, POS materials
- Development
  - Connecting technical documentation with planning and specification systems during development
Welcome to the Information Space!

Our products define an Information Space that allows you to address individual information units and their variants just the way you need it. This makes it possible to automatically generate product-specific information on a case-by-case basis and publish it in various media.
