Meister and COSIMA: Still going strong after 10 years - A Success Story

Christian Welter
Technical writer at Meister
Strömungstechnik GmbH

99 Software for technical documentation is just as important as CAD programs for designers.

Christian Welter, Technical writer at Meister Strömungstechnik GmbH

Meister Strömungstechnik GmbH

Founded in 1984, Meister Strömungstechnik GmbH develops, produces and distributes devices to measure and monitor flow rates in the industrial sector. The product portfolio includes equipment that covers a broad range of applications involving liquid and gaseous media. One of the company's particular strengths is developing custom solutions.

The company's management therefore opted to start using DOCUFY's COSIMA software in 2009 to create its technical documentation, in place of Word, Adobe InDesign and CorelDRAW. The main reasons for this choice were the clear layout of the software, its user-friendliness and the time savings generated as a result.

DOCUFY COSIMA

Now COSIMA is used to create around 20 sets of technical documentation in German and English per year. Christian Welter, who is responsible for technical documentation at Meister Strömungtechnik:

99 Our top priority is to provide our users with outstanding documentation which enables them to answer questions quickly and easily and use devices successfully. COSIMA is a great help here.

COSIMA - The Component Content Management System

COSIMA is the advanced Component Content Management System (CCMS) for your documentation processes that is ready for immediate use and can be adapted to your needs at any time - whether for mechanical and plant engineering, measurement and control technology, medical technology or automotive.

With the CCMS COSIMA, professional writers succeed in capturing their technical communication in the highest quality in a process-optimised manner and publishing it in all languages, formats and target systems.

"Thanks to the modular structure, installing updates is extremely simple. We can edit modules with a few clicks of the mouse and quickly integrate them into all of the required documents. This allows us to ensure that users are always receiving up-to-date information. Another reason why we opted for COSIMA was the greater legal security of our documentation. It was not possible to provide this level of security with conventional methods."

"Working with COSIMA is simple, even for those new to technical documentation"

Christian Welter is a qualified industrial technician and clerk. He only joined Meister Strömungstechnik in 2017 after a career change and started working with technical documentation.

2 I was not here for the kick-off and roll-out of COSIMA at Meister Strömungstechnik. As a newcomer in this sector, I found my feet very quickly with this Component Content Management System (CCMS) thanks to the intuitive operation and logical structure. My induction was rounded off by a training course at DOCUFY. Product management did a great job structuring the data for the kick-off and the roll-out.

Welter also considers the CCMS's future viability as one of its key advantages. He can also use TopicPilot and new technologies such as virtual or augmented reality at Meister Strömungstechnik. "Virtual reality in particular opens the door to unprecedented opportunities to visualize scenarios," he adds.

2) The huge immersion factor makes exploring virtual environments a whole new experience. We are on the road with our FlowMobil almost constantly as a kind of mobile test bench. Maintaining that mobility while always having the latest information to hand would certainly help our FlowMobil team in their work. So I think we have enough to be getting along with over the next ten years but with DOCUFY at our side we feel in the best possible shape to tackle future challenges.
